Ch. 27
#2
A nurse is instructing an assistive personnel (AP) about caring for a client who has a low platelet count. Which of the following instructions is the priority for measuring vital signs for this client?

A. "Do not measure the clients temperature rectally."
B. " Count the client's radial pulse for 30 seconds and multiply by 2."
C. "Do not let the client know you are counting their respirations."
D. "Let the client rest for 5 minutes before you measure their blood pressure." - CORRECT ANSWER A

learnexams

The greatest risk to a client who has a low platelet count is an injury that results in bleeding. Using a thermometer rectally poses a risk of injury to the rectal mucosa. The low platelet count contraindicates the use of the rectal route for this client.

Ch. 27
#3
A nurse is instructing a group of assistive personnel in measuring a client's RR. Which of the following guidelines should the nurse include? (Select all that apply.)

A. Place the client in semi-fowlers position
B. Have the client rest an arm across the abdomen.
C. Observe one full respiratory cycle before counting the rate.

Ch. 27
#5
A nurse is performing an admission assessment on a client. The nurse determines the clients radial pulse rate is 68/min and the simultaneous apical pulse rate is 84/min. What is the clients pulse deficit? - CORRECT ANSWER 16/min

The pulse deficit is the difference between the apical and radial rates. It reflects the number of ineffective or nonperfusing heartbeats that do no transmit pulsations to peripheral pulse points.
84-68=16
